

“Cutting the Cord” with Fiber Internet

Once upon a time, your home needed a phone line. Then television became more complex, demanding the use of a cable. Then the Internet came along, adding to the list of expenses. Have you considered how much you're paying for all of this? The reality is that many are overspending on these services, and individuals could be saving hundreds of dollars per year. By “cutting the cord” from your cable provider, and solely using an internet connection to stream television, these savings are achievable. Televisions that can connect to the internet, or smart TVs, are capable of streaming television. If you don't own a smart TV, you can purchase a streaming device that can be connected to your existing television allowing it to stream television over an internet connection. Below is a list of effective streaming devices. Prices may vary.

Streaming Device	Price
Amazon Fire TV Stick 4K	\$49.99
Chromecast With Google TV	\$49.99
Roku Streaming Stick 4K	\$49.99
Apple TV 4K	\$129

Once you have access to streaming, all that's left to do is subscribe to a streaming service of your liking. Streaming services differ in what channels they offer and pricing plans. Below is a short list of the many available services. This list primarily includes services that look to replicate traditional cable TV in their channel offerings.

Service	Base Price
DirectTV Stream	\$75 per month
Fubo	\$75 per month
Hulu + Live TV	\$70 per month with ads \$83 per month without ads
Philo	\$25 per month
Sling TV	\$40 per month
YouTube TV	\$73 per month

There are many services to choose from beyond this list, including ad-supported free services. Information regarding what these services offer can be found on their respective websites.
